

**Ideal Soil
Solutions**

Compliment

IN-FURROW | SOIL

PRODUCT DESCRIPTION

Compliment contains an array of aerobic (oxygen-loving) and anaerobic (oxygen-deficient) microbes which are naturally occurring in the soil. It is a solution with a unique and diverse team of naturally occurring beneficial microbes, present in high counts (billions per gallon). Compliment improves sustainability, supports quicker germination and stand, increases plant health, and encourages vigor, productivity, and soil condition (tilth). It does all of this by increasing the efficiency of old and newly applied fertilizers while reducing the impact of overapplying N, P, and K.

Compliment results in increased nutrient release and leads to quicker establishment, bigger root masses, larger leaves, larger plants, and greater yields of higher quality crops.

Product Name	Analysis	Application Rate	Product Description	Use Description	Lbs/Gal	Organic
SG Compliment	N/A	IF: 1-2 pt	Microbial Inoculant & Food Source	Apply with on-seed starter or as a seed treatment to establish beneficial microorganisms	8.30	YES
